This Paper is brought to you for free and open access by the Engineering at Calvin Digital Commons. It has been accepted for inclusion in ENGR 333 by an authorized administrator of Calvin Digital Commons. For more information, please contact [digitalcommons@calvin.edu](mailto:digitalcommons@calvin.edu).

# Natural Gas CO<sub>2</sub> Emissions Reduction Project

Fall 2022  
ENGR333ab  
Calvin University  
Prof. Heun

Sustainability is a multi-faceted grand challenge. One of today's largest challenges is related to sustainability: CO<sub>2</sub> emissions from energy consumption. Individuals, households, universities, corporations, nations, and other entities tackle the challenge in different ways and for differing reasons, according to their spheres of influence. Universities reduce their carbon emissions to reduce costs, to do right by the environment, and, in Calvin's case, to demonstrate creation care in accordance with item 4 of our Statement on Sustainability. (See <https://calvin.edu/offices-services/provost/files/sustainability-statement.pdf>.)

To demonstrate Calvin University's commitment to reducing carbon emissions, then-president Michael Le Roy signed the President's Climate Commitment on 6 December 2017. (See <https://calvin.edu/dotAsset/f294c564-3660-47fc-aa72-0b5baeea94c2.pdf> and <https://calvinchimes.org/2017/12/08/calvin-commits-to-carbon-neutrality-by-2057/>.) In doing so, President Le Roy committed Calvin to becoming carbon neutral by 2057. Progress on the climate commitment through the COVID-19 pandemic has been mixed (<https://calvinchimes.org/2021/12/05/calvins-progress-on-carbon-neutrality-sustainability-murky-during-pandemic/>), with carbon emissions reductions likely caused by both improved energy efficiency (especially in lighting) and reduced enrollment.

Reducing CO<sub>2</sub> emissions from energy consumption at universities in Michigan involves two large tasks: (a) eliminating fossil-fuel electricity consumption and (b) displacing natural gas for heating. (Carbon emissions from transportation fuels is usually a small part of any university's carbon footprint.) The new Calvin administration (starting July 2022) demonstrated continued commitment to reducing carbon emissions from fossil-fuel electricity by signing a memorandum of understanding (MOU) with Sun FUND<sup>ED</sup>, a solar-as-a-service company focused on higher education. (See <https://calvin.edu/news/archive/accelerating-calvin-universitys-energy-transition>.) But what about replacing natural gas for heating?

Of course, Calvin does not purchase natural gas to have natural gas; we purchase natural gas for the *energy services* it can provide, among them space heating. Space heating is the downstream result of an energy conversion chain that includes boilers, hot water, steam, pipes, radiators, and buildings. As such, space heating is provided by a series of energy conversion machines and energy carriers, each of which is in the domain of thermodynamics and thermal systems, the subjects of ENGR333.

Connecting the dots among CO<sub>2</sub> emissions reductions, Calvin University, and ENGR333, we find that natural gas heating provides an excellent opportunity to develop thermal systems analysis and design skills around energy and carbon emissions. This semester, we will explore options for reducing CO<sub>2</sub> emissions from heating, using Calvin University as a case study. The question to guide your work this semester is:

*What would it take to eliminate Calvin's natural gas-related net CO<sub>2</sub> emissions?*

You (the ENGR333 students) will pursue an answer to this question in groups of 4–5 students each, with each section developing an independent (and possibly different) answer. Your response

to the question (“*What would it take ...*”) should take the form of two reports (one from each section) containing your section’s answer to the question and comprehensive and accurate information from your analyses. A suggested outline for each section’s report is a main technical memo followed by one appendix from each group in the section. Each appendix should be its own technical memo. Each appendix must be thorough and provide your customer (see below) and others with enough information to evaluate your answer and, ultimately, to make wise decisions about the design of future energy- and carbon-efficient heating systems for Calvin.

The customer for your work is Dr. Wiebe Boer, president of Calvin University. President Boer is an expert in solar photovoltaics to reduce CO<sub>2</sub> emissions from electricity but desires support to investigate options for eliminating CO<sub>2</sub> emissions from natural gas heating at Calvin.

Each group of 4–5 students must analyze a different aspect of the question, such as:

- Purchasing and consuming renewable natural gas (RNG).
- Air-source heat pump technology paired with carbon-free electricity.
- Ground-source heat pump technology paired with carbon-free electricity.
- How future changes in energy markets (for natural gas, RNG, and electricity) will affect timing and strategy for implementing a zero-carbon heat system at Calvin.
- Building energy efficiency improvements as a means to reduce demand for heating, thereby reducing the cost of replacing natural gas. Practically, this means fixing (finally!) the heating systems in dormitories and other buildings.

Initially, groups in each section will be organized around the topics above.

The deliverables are:

- (a) an Engineering department seminar on **Wednesday, 30 November 2022** at 4:00 PM in CFAC recital hall (both sections in one seminar).
- (b) one poster per section to be presented at the Calvin University Sustainability Showcase at 3:30 PM on **Thursday, 1 December 2022** (**\*\*\*\* venue TBD \*\*\*\***).
- (c) two written final reports (one per section) that provide detailed descriptions of your work during the semester, due on the final day of classes (**1 PM, Wednesday, 7 December 2022**).

Each ENGR333 student must attend either (a) the Engineering department seminar or (b) the Sustainability Showcase poster session.

Each final report will consist of:

- (a) paper copies of your final technical memo with extensive appendices,
- (b) an electronic copy of your final report (.pdf format, one file per section) to be posted at <http://www.calvin.edu/~mkh2>, and
- (c) a flash drive or other means of conveyance containing electronic copies of all models, spreadsheets, posters, presentations, programs, and software analysis tools that you developed during the project.

You must submit copies of your final report (all three elements) to Prof. Heun.

Posters must be prepared from a template provided on Moodle. Posters must be submitted via email to [slc@calvin.edu](mailto:slc@calvin.edu) **one week** prior to the Sustainability Showcase poster session date (i.e., **Thursday, 24 November 2022**).

Each section must send notes of appreciation to each person who provided assistance during the

semester.

Prior to the first class meeting each week (typically Monday), each student must submit a weekly timecard that includes

- hours worked on the project and
- a brief (1 paragraph) description of work accomplished.

Groups and sections are encouraged to share relevant information obtained from external sources and from your own research throughout the semester. To facilitate information sharing, each section should consider forming an executive team to coordinate the work of the groups in each section and, where applicable, across sections. Executive team members should mostly be relieved of their group's analysis responsibilities.

The professor will select students to form groups. To apply for one of the available groups, prepare a cover letter and resume and submit on Moodle by 8 PM on **Wednesday, 31 August 2022**. Your cover letter should indicate which group piques your interest and why you believe you are qualified to be included in that group. (You may supply first and second choices.) Group assignments will be announced via Moodle by the evening of **Thursday, 1 September 2022**.

An initial task for each group is to develop a schedule of your activities for the semester that includes all important dates and coordination among groups. Schedules must be discussed during oral progress reports (see below).

There will be three short, in-class progress reports in the form of oral presentations. A longer, in-class final presentation will summarize results of the project. Each student must give either (a) a progress report presentation or (b) part of the final presentation. The customer will be present at all presentations. The presentations must be professional quality, must concisely report your progress, and must provide sufficient technical detail for customer, professor, and peer review of your progress. Only 1 student from each team may participate in each oral progress report and 2 students (at most) from each team may participate in the final in-class report.

The in-class progress reports must follow this outline:

- Status relative to your schedule (and any re-planning that has occurred since your last report)
- Work accomplished since your last report (including technical and cost savings details)
- Issues or concerns (and plan for addressing them)
- Work planned for upcoming reporting period

The final in-class oral report should *not* follow the outline above. Rather it should summarize the final technical details of your work, how your technical work was used to estimate energy and carbon savings, and the conclusions of your group's work.

You must bring printed copies (6-up, double sided to save paper) of all in-class presentations for customer, professor, and resources.

The professor, in conjunction with the customer, will select an exemplary student from each section for a teamwork award at the end of the semester.

Despite the presence of an external customer for your work, the professor will assign final grades (in consultation with the customer). Students will be assessed on (a) the quality of their team's report, (b) peer evaluation, and (c) hours worked.

### Supporting Resources:

- The customer: President Boer, [president@calvin.edu](mailto:president@calvin.edu), (616) 526-6100. Be aware that email messages are screened by the president's assistant. Please coordinate and aggregate questions before reaching out to President Boer.
- Calvin administrators:
  - Tim Fennema, CFO, [tf27@calvin.edu](mailto:tf27@calvin.edu), (616) 915-2478.
  - Nick Thompson, Direct of Facilities and Sustainability, [ndt4@calvin.edu](mailto:ndt4@calvin.edu), (616) 526-6444.
- External support:
  - Trent DeBoer, GMB Architects, [trentd@gmb.com](mailto:trentd@gmb.com), (616) 796-0200.
  - Nate Van Heukelem, GMB Architects, [natev@gmb.com](mailto:natev@gmb.com), (616) 796-0200.
- Previous ENGR333 design projects available at [http://www.calvin.edu/~mkh2/thermal-fluid\\_systems\\_desig/](http://www.calvin.edu/~mkh2/thermal-fluid_systems_desig/).
- Classroom learning on energy, exergy, economics, and thermal analysis
- Prior laboratory and lecture classes
- Independent research

## Natural Gas CO<sub>2</sub> Emissions Reduction Project

### Fall 2022

**Note: Bold schedule items indicate customer participation 11:00 AM–12:50 PM in NH050.**

Day	Date	Activity
<b>Wed</b>	<b>31 Aug</b>	<b>Project introduction, objectives, deliverables</b>
Wed	31 Aug	Resumes and cover letters due to Prof. Heun at 8 PM.
Thur	1 Sep	Groups assigned via Moodle.
Tue	6 Sep	Project work day (Meet in the classroom for group work)
<b>Tue</b>	<b>13 Sep</b>	<b>In-class group presentations (5 minutes + 2 for questions) Use required outline.</b>
Tue	20 Sep	Project work day (Meet in the classroom for group work)
<b>Tue</b>	<b>27 Sep</b>	<b>In-class group presentations (5 minutes + 2 for questions) Use required outline.</b>
Tue	4 Oct	Project work day (Meet in the classroom for group work)
Wed	12 Oct	Project work day (Meet in the classroom for group work) **Wednesday**
<b>Tue</b>	<b>18 Oct</b>	<b>In-class group presentations (5 minutes + 2 for questions) Use required outline.</b>
Tue	25 Oct	Project work day (Meet in the classroom for group work)
Tue	8 Nov	Project work day (Meet in the classroom for group work)
Mon	14 Nov	Project work day (Meet in the classroom for group work)
Tue	15 Nov	Project work day (Meet in the classroom for group work)
Wed	16 Nov	Project work day (Meet in the classroom for group work)
Fri	18 Nov	Project work day (Meet in the classroom for group work)
<b>Mon</b>	<b>21 Nov</b>	<b>Project final presentations (10 minutes + 4 for questions) Report on final results. Don't go home early for Thanksgiving break!</b>
<b>Tue</b>	<b>22 Nov</b>	<b>Project final presentations (10 minutes + 4 for questions) Report on final results. Don't go home early for Thanksgiving break!</b>
Mon	28 Nov	Peer and Project Assessment due (3:30 PM)
Wed	30 Nov	ENGR Department Seminar 4:00 PM (CFAC recital hall)
Thur	1 Dec	Sustainability Showcase poster session, 3:30 PM (Venue TBD)
Wed	7 Dec	Final report due

# Natural Gas CO<sub>2</sub> Emissions Reduction Project

## Peer and Project Assessment

Fall 2022  
ENGR333  
Prof. Heun

Throughout this semester, you analyzed rebound and backfire for CO<sub>2</sub> emissions reductions. Now, your professor would like your feedback about the process in the form of a peer and project assessment. Part of your grade for the project will be determined by the quality of your peer and project assessment. Your response is and will remain confidential. Peer and project assessments are due at **3:30 PM on Monday 28 November 2022** in Prof. Heun's office.

- 1) Write one paragraph identifying one or two members of the class who performed exemplarily during this project. Provide examples of their supererogatory efforts.
- 2) Create a bullet-point list of 3 personal learnings (takeaways) from the project.
- 3) Create a bullet-point list of 3 suggestions for future ways to reduce CO<sub>2</sub> emissions related to natural gas consumption. In other words, what suggestions do you have for Calvin moving forward?
- 4) Write one paragraph answering these questions: If you put this project on a resume, would you list it as "community service?" Does engineering (as a discipline) value volunteer work and community service? Why or why not?
- 5) Write one paragraph describing if or how your participation in this project caused you to alter your behavior this semester. Did you see any connections between your own personal behavior and CO<sub>2</sub> emissions reduction? If you didn't change your behavior at all, describe why not.
- 6) What nontechnical skills did you learn in the course of this project? Do you expect that these non-technical skills will be relevant to your future work as an engineer? If so, why? If not, why not?
- 7) Write three paragraphs addressing this question: what are the connections between (a) energy efficiency and (b) the twin challenges of (i) energy resource depletion and (ii) climate change caused by global warming?
- 8) Write one paragraph detailing your role and contributions to your small group team. Conclude the paragraph by assigning yourself a letter grade for your work on the project. Justify your grade.
- 9) Write one paragraph each detailing the roles and contributions of the three (or four) other team members. Conclude the paragraphs by assigning a letter grade for your teammates' work on the project. [Total of three (or four) paragraphs and three (or four) individual letter grades.]
- 10) Write one paragraph indicating any topics relevant to the content of ENGR333 that, in your opinion, would be interesting for future classes to study. Also provide any suggestions for

improvements to the structure of this project in future years.

When writing paragraphs assessing yourself and your peers, you may wish to use the following rubric.

Did the individual:

- Research useful information for your group?
- Display punctuality in meeting deadlines?
- Thoroughly complete assigned duties?
- Share equally in work performed by the group?
- Perform work of high quality or did their work often require revision?
- Help direct the group in setting goals?
- Help direct the group in meeting goals?
- Encourage group members to share ideas?
- Display empathy during group discussions and work?
- Listen to ideas from other group members?
- Participate in helping the group work together better?
